

UMAIR AMIR

Full Stack Engineer · TypeScript / NestJS / PostgreSQL

+92-316-8946190 · codewithumair867@gmail.com · linkedin.com/in/umair-amir · github.com/CodeWithUmayr · umairamir.com

TECHNICAL SKILLS

- **Frontend:** React, Next.js (App Router), TypeScript, Redux Toolkit, Tailwind CSS
- **Backend:** Node.js, NestJS, Express.js, REST API design, JWT/OAuth2/RBAC, Stripe webhooks, cron jobs, WebSockets
- **AI / LLM:** LangChain, LangGraph, Claude API, OpenAI, RAG, pgvector, AI agents
- **Database:** PostgreSQL, Prisma ORM, MongoDB, Supabase, Redis
- **DevOps:** AWS (EC2, S3, Textract), Terraform, Docker, GitHub Actions, PM2, Nginx, Git

PROFESSIONAL EXPERIENCE

Decrypted Labs | Full Stack Engineer

Jun 2024 - Present

- Designed the core CPT and visit-based billing data model for a chiropractic billing platform (NestJS, Prisma, PostgreSQL), covering patients, appointments, insurance claims, and attorney letters of protection across roughly 31 screens.
- Built server-side permission guards at the controller level and a server-only session layer, backed by an audit trail model, with 76 Playwright end-to-end tests covering the billing workflow.
- Delivered a durable medical equipment billing platform as a single NestJS/Next.js codebase running two white-label instances on isolated databases for two separate clients; built OCR-based document intake on AWS Textract and S3, and owns the EC2/pm2/GitHub Actions deploy pipeline and database migrations.
- Built a multi-tenant RAG platform (NestJS, pgvector, OpenAI, Supabase) with tenant isolation enforced at the data layer, document ingestion, and context-aware chat.
- Shipped Stripe webhook payment flows with idempotent retry handling, refunds, and replayable failed payouts, plus a referral and promo code engine, for a cruise booking platform.
- Reviews teammates' branches before merge; has blocked merges over authorization gaps and queries written in a form that could not use an index.

Ecommerce Inside | MERN Stack Engineer

Jul 2022 - Jun 2024

- Built REST APIs on Express.js with an MVC structure and MongoDB, with root-cause debugging and written follow-ups so recurring issues stopped recurring.
- Built responsive React storefronts with Tailwind and Bootstrap, maintaining cross-browser consistency.

KEY PROJECTS

LightNX Defence Platform | Next.js, NestJS, PostgreSQL, WebSockets, Mapbox

- Real-time asset tracking and alert management for a defence client, with role-based access control over sensitive operational data.
- Authorization enforced server-side on every data path rather than in the UI layer, closing a class of access bugs before they reach production.

AI SDR Agent | LangGraph, Claude API, Next.js, PostgreSQL

- Autonomous outbound sales agent live at app.umairamir.com, built on LangGraph state machines with scheduled and queued background steps rather than a single synchronous call chain.
- Handles tool calling, structured outputs, and persisted conversation state across multi-step agent runs.

EDUCATION

BS Computer Science | Virtual University of Pakistan
